Abstract

There is an interesting and magic corresponding relationship between the fingers of primates (human beings as representative) and the ancient plates that had been varying from the left to right whirl arm of the Cross “+” shape ocean-plate whirlpool of the Earth. It is implied by the feature evolution of the planet Earth that primates, especially the human race, should be the top ceiling species evolving on the Earth up to nowadays.

That may explain the nature phenomenon that human individuals, including other primates, only have five fingers in one hand (left or right). Although it looks the same from left to right same fingers, they actually inherent to the different features of expanding and shrinking based on the different corresponding features of left and right whirl arms of the Cross “+” shape ocean-plate whirlpool of the Earth.

Keywords: Cross “+” Shape Ocean-Plate Whirlpool; Unique Supercontinent; Hinted Black Hole; Ayers Rock; Whirl Arm; Primates; Pacific Ring of Fire.

Introduction

Have you ever wondered why human individuals, including other primates, acting as the top species of the Earth, only have five fingers in one hand of left or right universally?

Have you ever wondered, in western culture, why new couples would like to wear diamond rings that symbolize eternal love on their ring fingers on wedding ceremonies? Is it a legend or fiction about the wedding ring of new couples?

Have you ever wondered why the fourth finger of left or right is called ring finger? Have you ever chosen the Ayers Rock located in the geometrical center of the Australian native island to witness the eternal love with your intimate partner just like other celebrities did, such as the William Prince couple of United Kingdom on April

22, 2014?

In fact, it is the reflection of the feature evolution of the Earth on human or other primates' body parts and their social activities.

The Unique Supercontinent Surrounded by Ancient Atlantic Ocean 66 Ma Ago.

The unique supercontinent [1] on the planet Earth 66 Ma ago seemed to be a lonely island surrounded by the ancient Atlantic Ocean. However, it was dominated by the dinosaur family for almost 160 million years. It is shown by Figure 1 as follows,

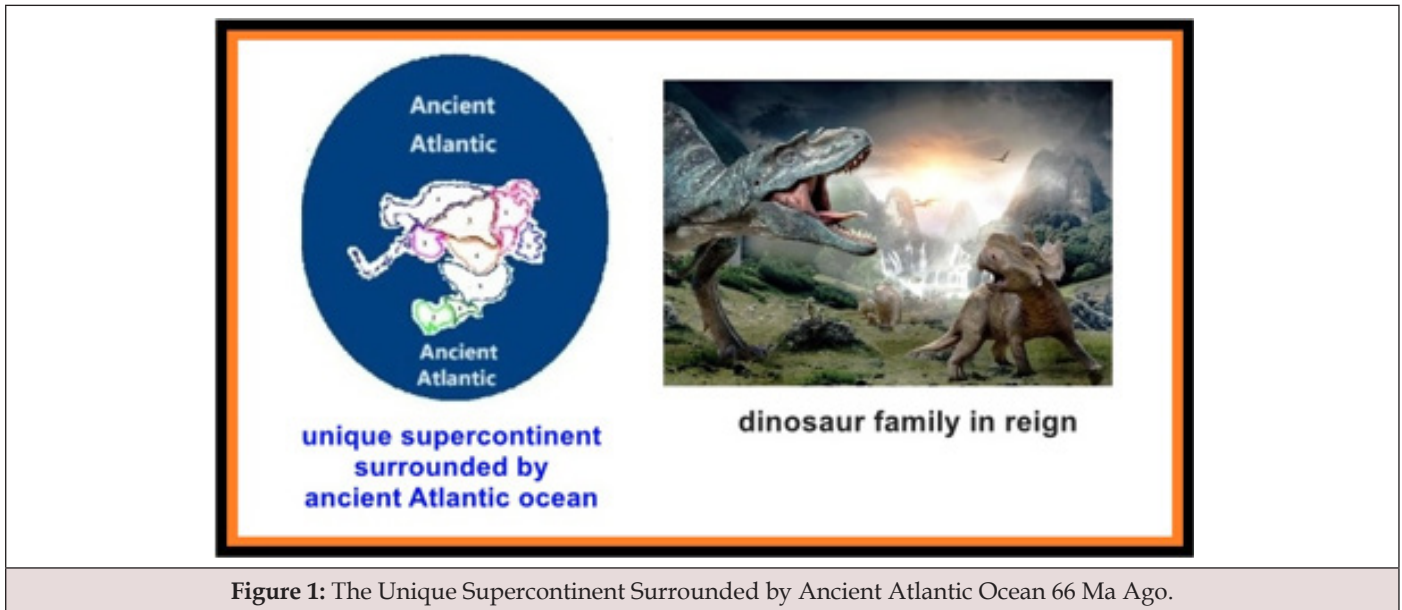

Figure 1: The Unique Supercontinent Surrounded by Ancient Atlantic Ocean 66 Ma Ago.

The Birth and Evolution of the Cross “+” Shape Ocean-Plate Whirlpool of Double Whirl Arms.

The Cross “+” shape ocean-plate whirlpool [2] of double whirl arms was born at end of the Cretaceous time about 66 Ma ago due to the dissembling of the unique supercontinent and accompanied

with the birth of the new Pacific Ocean and the extinction of the dinosaur family. Beginning from the equatorial area, it had been rotating anticlockwise and drifting northward in a speed of as slow as that of a snail moving all the time. It is shown by Figure 2 as follows, It is shown by Figure 3 as follows,

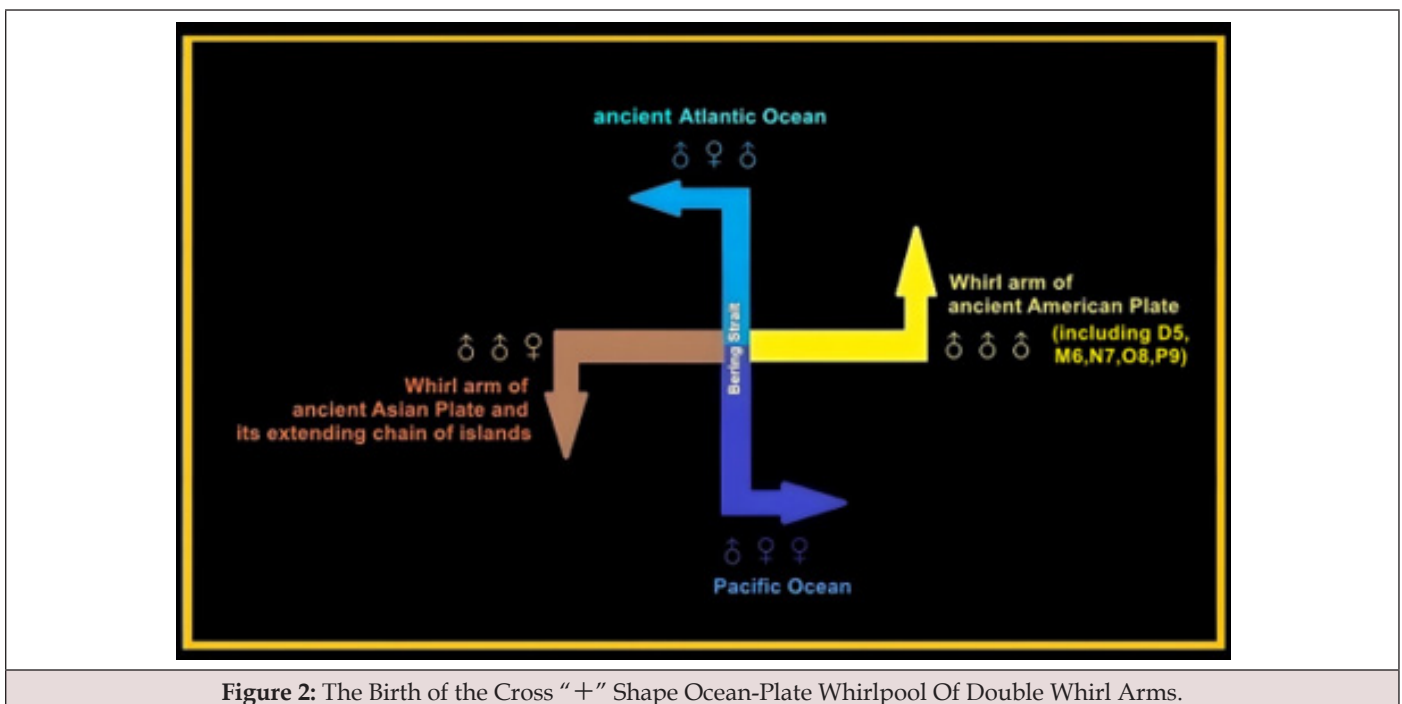

Figure 2: The Birth of the Cross “+” Shape Ocean-Plate Whirlpool Of Double Whirl Arms.

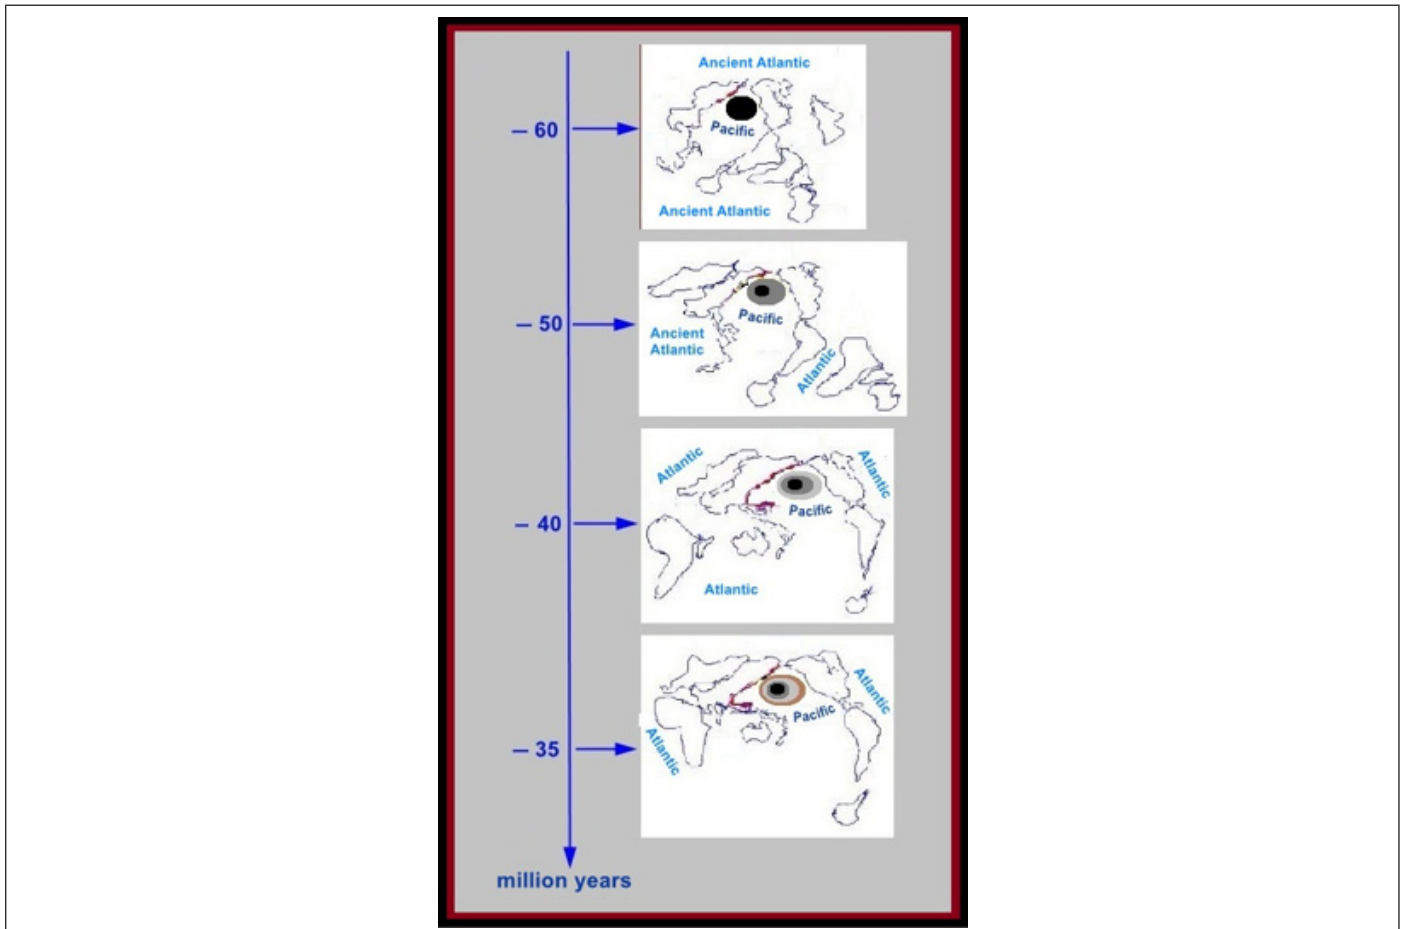

Figure 3: The Evolution of the Cross “+” Shape Ocean-Plate Whirlpool of Double Whirl Arms.

During the past 66 Ma, in the former period of time, the left whirl arm of ancient American plate and the other attached five ancient plates (D5,M6,N7,O8,P9) had been behaving as the state of expanding which led to the separation of the other attached five ancient plates from the ancient American plate. In the latter period of time, the four other ancient plates (M6,N7,O8,P9) collided with the right whirl arm of ancient Asian plate and its extending island chain gradually and became parts of the right whirl arm. As a result, the right whirl arm had been behaving as the state of

shrinking attributed to the squeezing of the four added ancient plates (M6,N7,O8,P9) all the time. While the ancient Jingzhou plate (D5, the predecessor of the ancient Antarctic plate) slid into the South Pole area alone.

Nowadays, the double whirl arms of ancient plates have been shown lively by the Pacific Ring of Fire [3]. They have been just in an outline of “Ω” shape to encircle the Hinted Black Hole [2] which is located on the Northwestern Pacific floor. It is shown by Figure 4 as follows,

Figure 4: The Double Whirl Arms Shown by the Pacific Ring of Fire.

The Corresponding Relationship Between Five Fingers of Left Hand and the Five Ancient Plates of Left Whirl Arm 65 Ma Ago.

It is interesting that there was a corresponding relationship

between the five left fingers of Primates [4] (e.g. human individual) and the five ancient plates of the left whirl arm of the new born ocean-plate whirlpool about 65 Ma ago. It is shown by Figure 5 as follows,

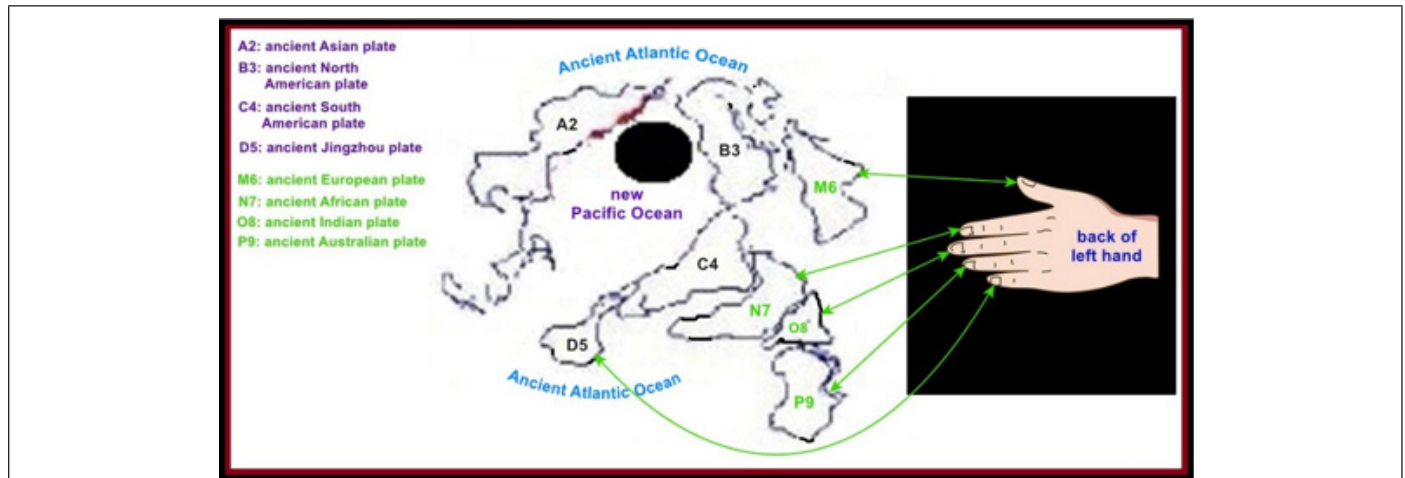

Figure 5: The Corresponding Relationship Between Five Fingers of Left Hand and the Five Ancient Plates of Left Whirl Arm 65 Ma Ago.

The above corresponding relationships are listed as the following table 1,

Table 1: The above Corresponding Relationships Between Left Hand and Left Whirl Arm 65 Ma Ago.

Finger name of left hand	Ancient plate name
Thumb	Ancient European plate(M6)
Index finger	Ancient African plate(N7)
Middle finger	Ancient Indian plate(O8)
Ring finger	Ancient Australian plate(P9)
Little finger	Ancient Jingzhou plate (D5, the predecessor of the ancient Antarctic plate)

The Corresponding Relationship Between Five Fingers of Right Hand and the Five Ancient Plates of Right Whirl Arm Nowadays.

Nowadays, it is reasonable that there is a corresponding relationship between the five right fingers of Primates (e.g. human

individual) and the five ancient plates of the right whirl arm of the ocean-plate whirlpool. It is shown by Figure 6 as follows,

The above corresponding relationships are listed as the following table 2,

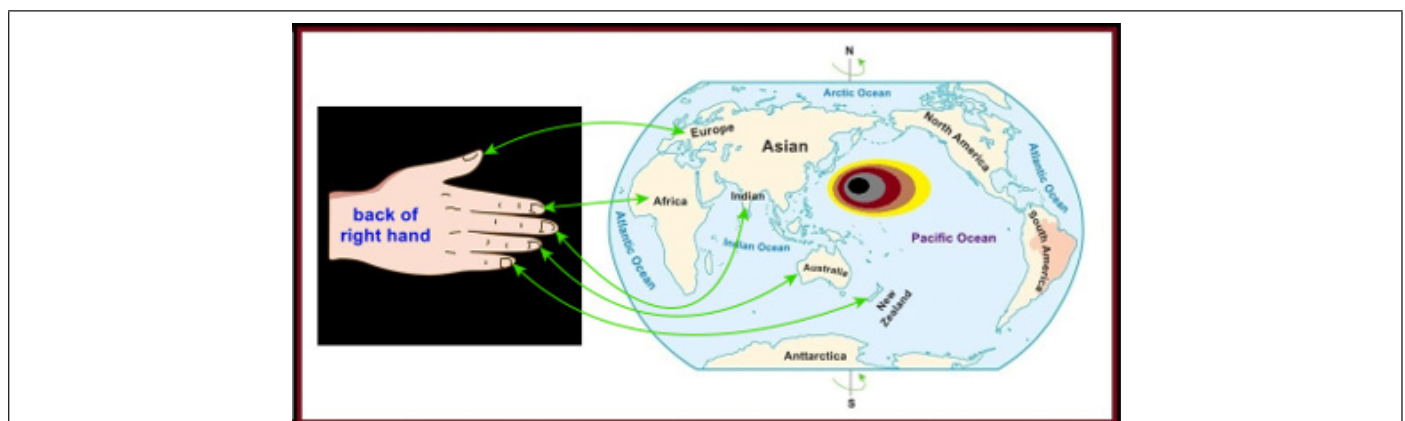

Figure 6: The Corresponding Relationship Between Five Fingers of Right Hand and the Five Ancient Plates of Right Whirl Arm Nowadays.

Table 2: The above Corresponding Relationships Between Right Hand and Right Whirl Arm Nowadays.

Finger name of right hand	Ancient plate name
Thumb	Ancient European plate
Index finger	Ancient African plate
Middle finger	Ancient Indian plate
Ring finger	Ancient Australian plate
Little finger	Ancient New Zealand island

The Proof to Be Implied by the Ayers Rock Located at the Geometrical Center of the Australian Native Island.

Figure 7: The Ayers Rock Had Been Implying the Celestial Body Ring for Tens of Millions of Years.

It is not difficult to find that there is a corresponding relationship between the left or right ring finger and the ancient Australian plate. However, the Ayers Rock [5], lying on the geometrical center of the ancient Australian native island, had been acting as the mysterious celestial body ring [5] for tens of millions of years. The ancient Australian native island may be called as the celestial body ring foundation of the Earth. It is shown by Figure 7 as follows, That

phenomenon of nature may explain the fact that the new couples would always like to wear diamond rings on their left or right ring fingers (left ones mostly) on the wedding ceremonies in western culture. That is to say, the behaviors of human beings in important social activities just coincide with what once happened on the celestial body of the planet Earth.

Discussion

What is the Top Ceiling for the Upgrading Evolution of Life on the Earth?

Figure 8: The Upgrading Evolution of Life in a Spiral Way from Simple to Complex.

It is well known that life on the Earth has been evolving from simple to complex until humankind today in a spiral way for hundreds of millions of years. It is shown by Figure 8 as follows,

From the corresponding relationships between human body parts and the ancient plates of the Earth, it is reasonable to deduce that it should be the feature of the Earth that determines the top ceiling of the upgrading evolution of life on it. That is to say, primates,

especially the human race, would be the top species on the Earth nowadays since it coincides with the significant characteristics of it.

Would Human Beings Become a Kind of Multiplanetary Species by Immigrating to other Celestial Bodies in Large Scale Population in the Future as What Someone once Boasted Confidently?

The feature of the Earth determines that it would be the unique base camp for human beings in the universe since they are the crystals of top ceilings to evolve out of the Earth. The probability of becoming a kind of multiplanetary species by immigrating to other celestial bodies in large scale population would be close to zero.

Conclusion

The evolution of the double whirl arms of the Cross “+” shape ocean-plate whirlpool had been varying from the expanding state of left whirl arm of the ancient American plate by reducing five ancient plates to the shrinking state of right whirl arm of the ancient Asian plate by adding four ancient plates.

The feature evolution of the Cross “+” shape ocean-plate whirlpool implies that human race (including other primates)

should be the top ceiling species with five fingers on left/right hand evolved on the planet Earth up to nowadays in the past hundreds of millions of years. However, the four ancient plates (the European, African, Indian and Australian plate) had been playing the common roles between the left and right whirl arm of the Cross “+” shape ocean-plate whirlpool with indicating different meanings by their different states of expanding and shrinking.
