## Abstract

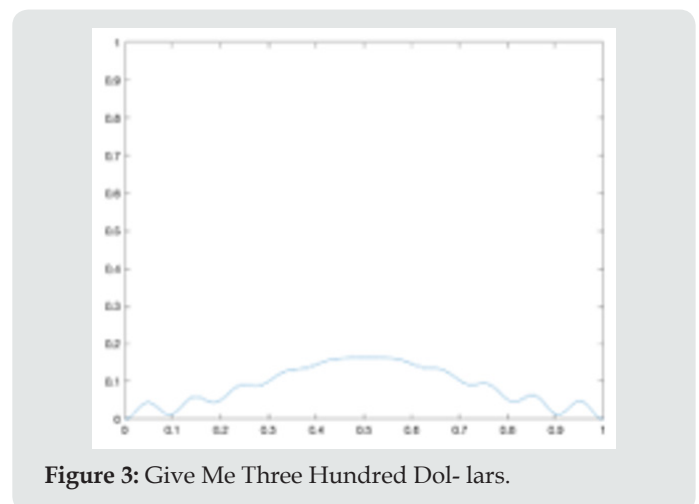

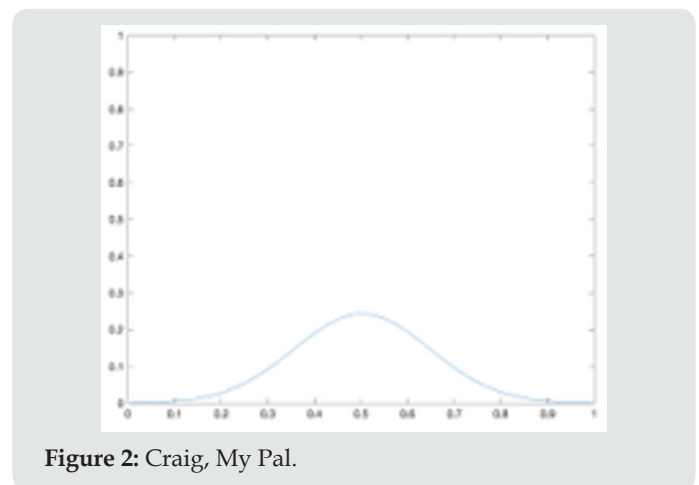

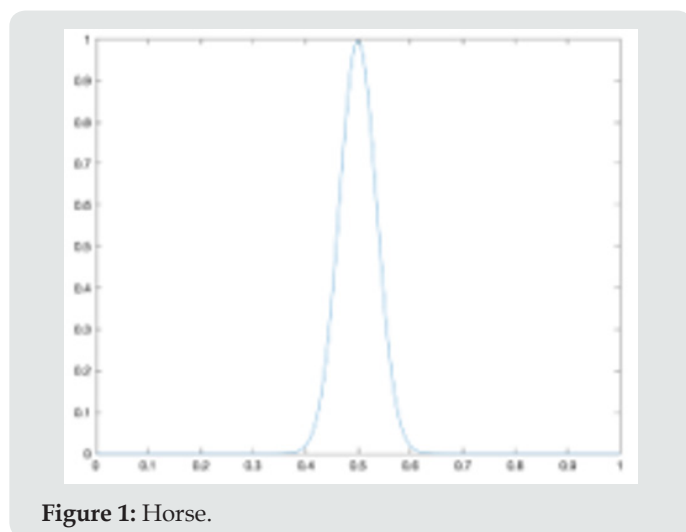

The purpose of this project is to investigate numerical methods for messing with people who send me unsolicited emails regarding submitting papers to their sketchy, likely made-up journal.

## Introduction and Motivations

The purpose of this project is to investigate numerical methods for messing with people who send me unsolicited emails regarding submitting papers to their sketchy, likely made-up journal. This report will present no original research and instead is intended to waste the time of whoever sent me this email.

## Discussion

Although the animations produced in the creation of this report are more telling of the nature of the system (as is often the case with time-dependent phenomena), the still frames reproduced here highlight a number of key features, such as My Butt (Figures 1-4).

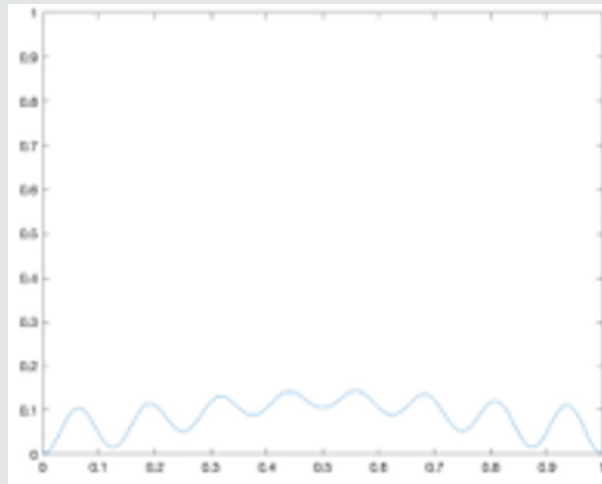

Figure 4: I Am God.
